

IF YOU FIND A SUSPICIOUS AQUATIC PLANT
mark the location with a weighted buoy and carefully
collect a specimen for confirmed identification.
Do not attempt to remove the entire plant! Place
the specimen in a container of water and store in a cool
place. Contact the Maine Volunteer Lake Monitoring
Program at 207-783-7733 or vlmpp@mainevlmp.org
for further instruction. For more information please
visit www.mainevlmp.org.

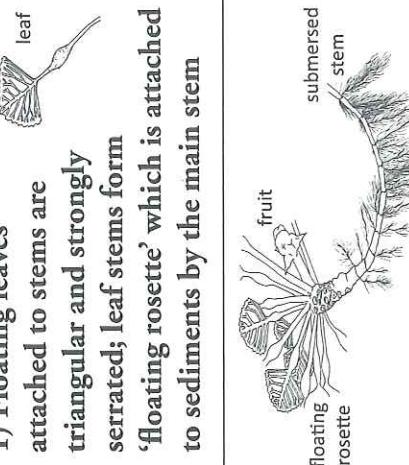

STEP ONE: Select the category that best describes your plant.

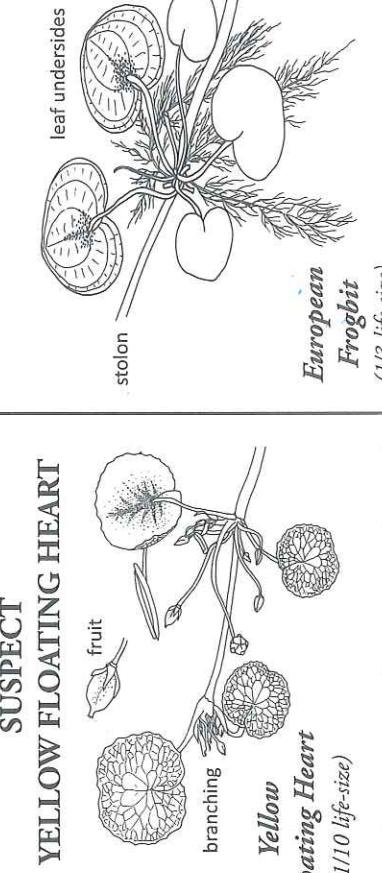

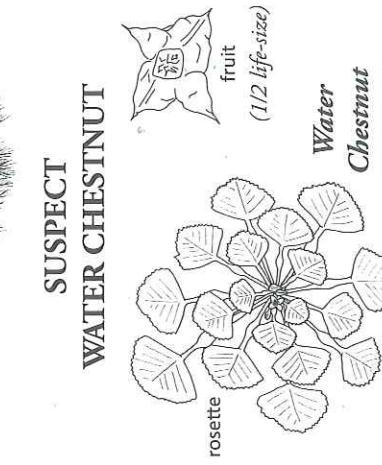

STEP TWO: If your plant fits into category A, B, or C, it *may* be an invasive aquatic plant. Continue on to the section that corresponds to your selected category.

A Plants with primary leaves floating; leaves not ribbon-like

Read the numbered descriptions below, and follow additional guidance where indicated. If no descriptions match your plant, rule out the following three depicted invaders.

2a) Plant IS ROOTED to the sediments	2b) Plant IS NOT ROOTED to the sediments
If there is branching along the main stem (<i>multiple side-stems connected to a single rooted stem</i>) and/or if the plant has showy, five-petaled yellow flowers	If leaf stems are joined in a clump, with some attached to other clumps by stem-like runners (<i>stolons</i>)

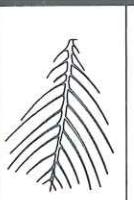

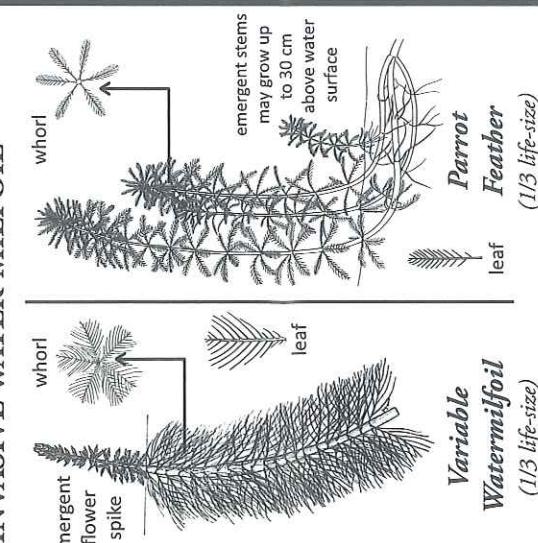

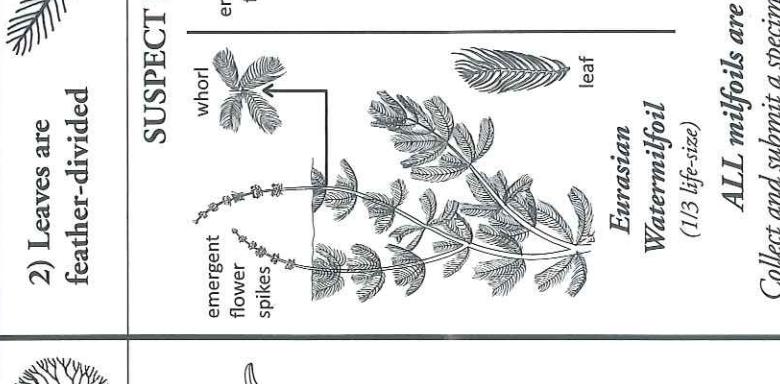

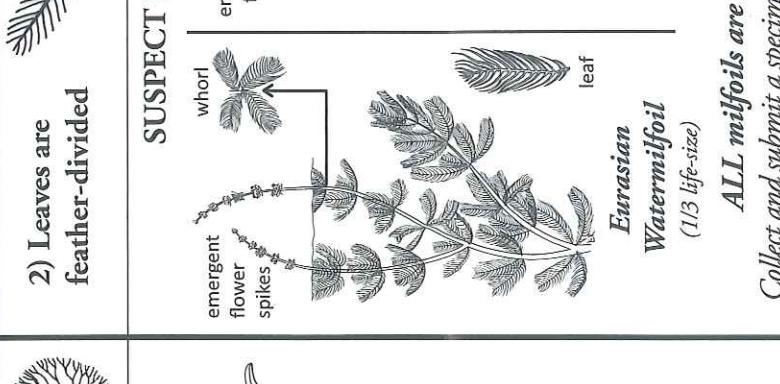

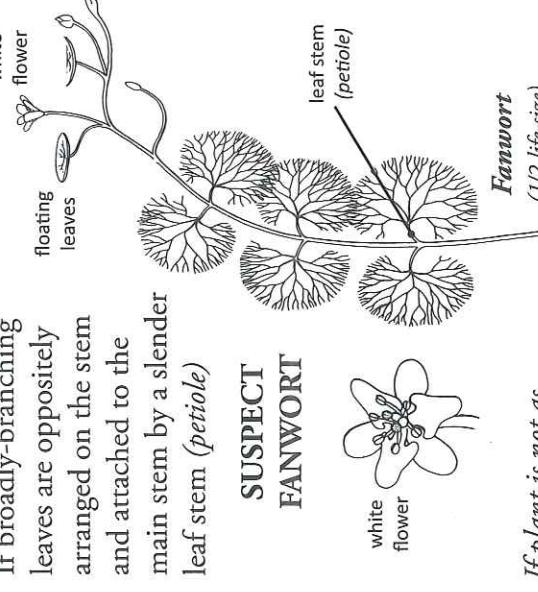

If no branching or flowers are observed, err on the side of caution and collect a specimen for identification.

If plant is not as described above, rule out this invasive plant.

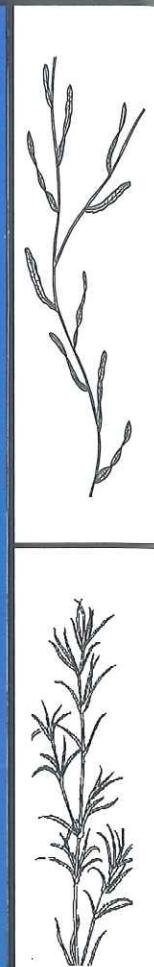

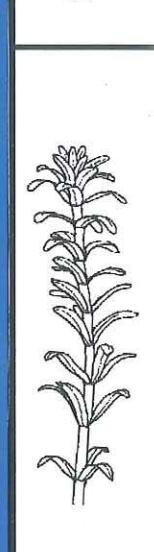

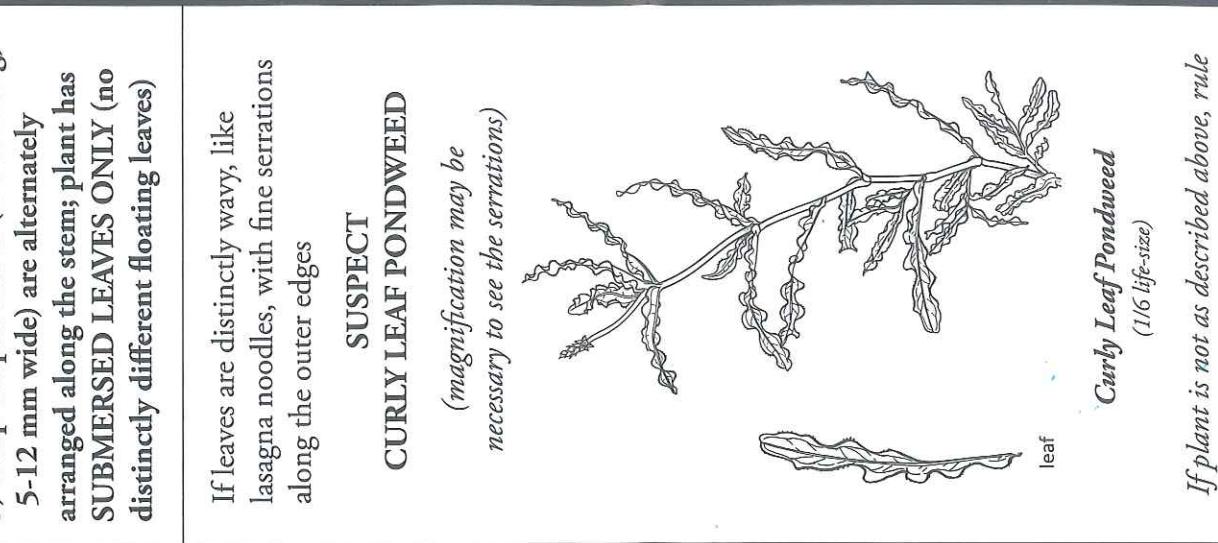

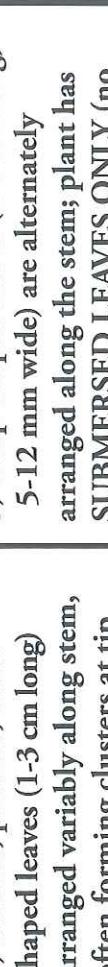

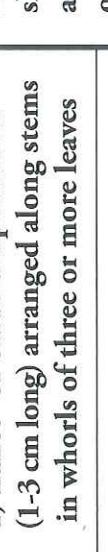

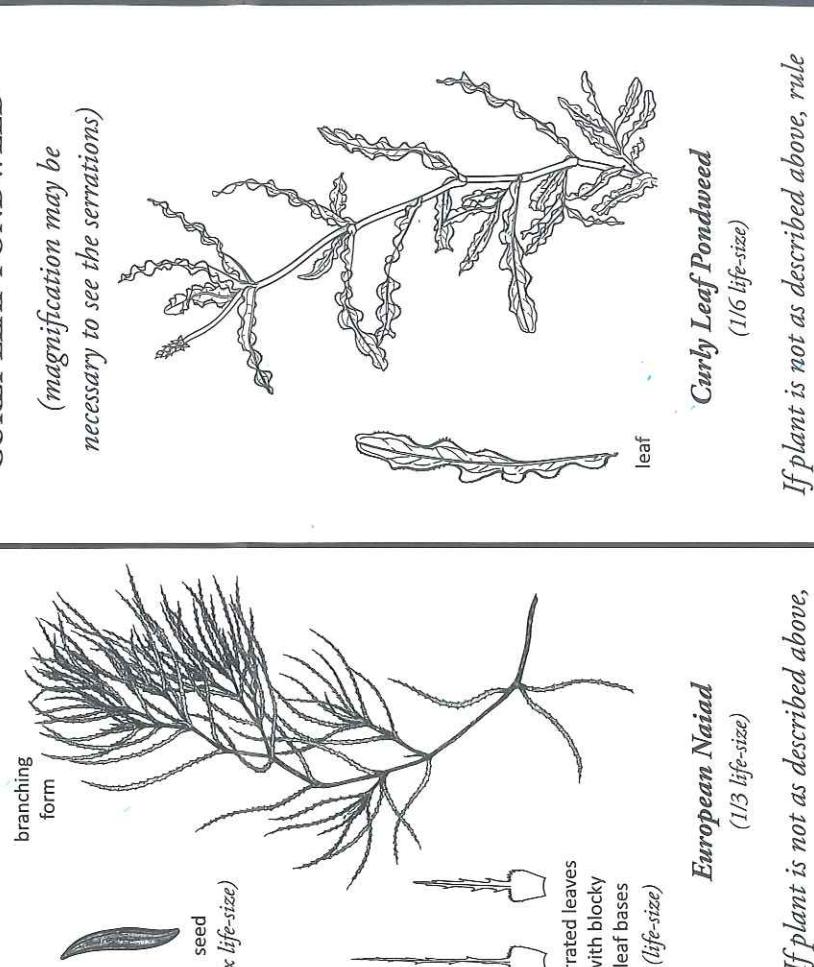

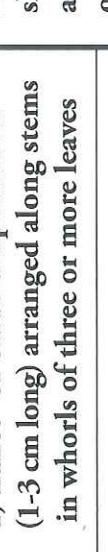

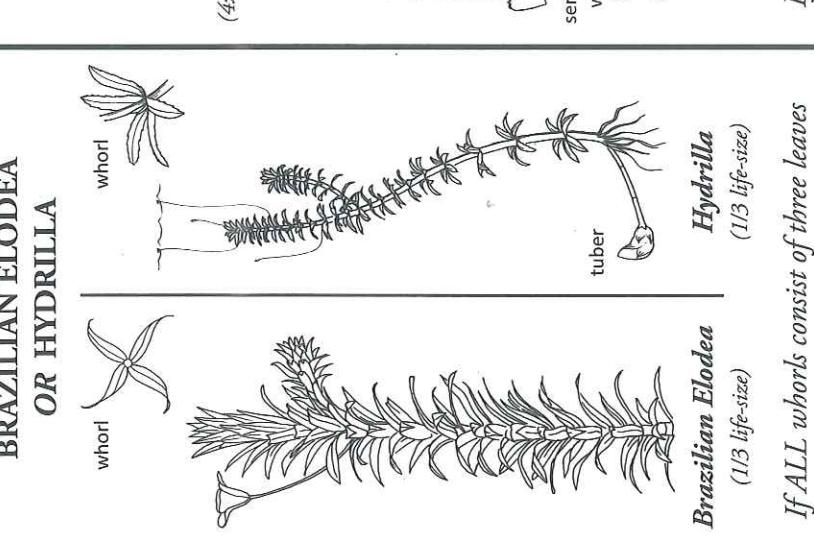

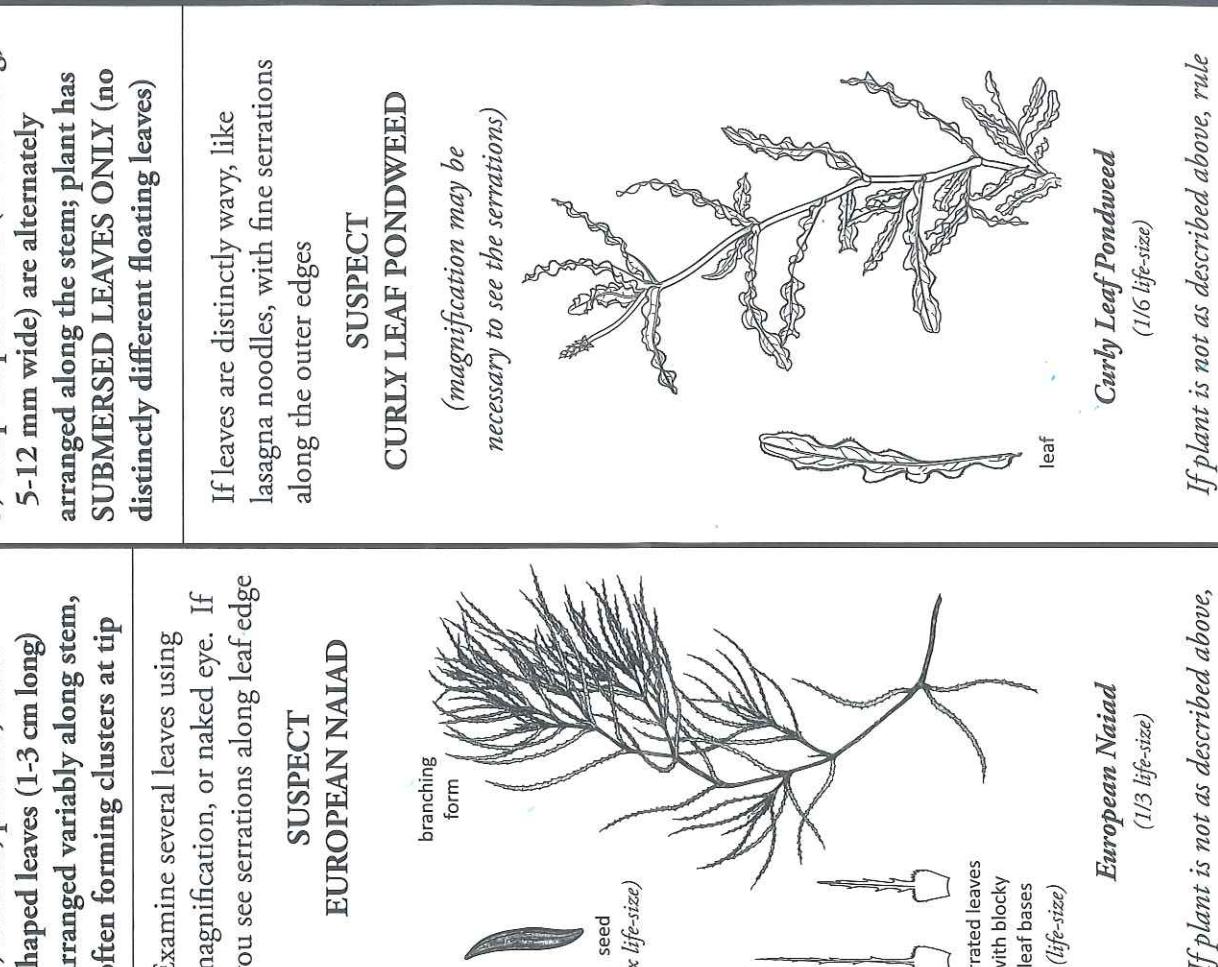

B**Plants with finely-divided leaves arranged on submersed stems**

Read the numbered descriptions below, and follow additional guidance where indicated. If no descriptions match your plant, rule out the following four depicted invaders.

		SUSPECT INVASIVE WATER-MILFOIL  Parrot Feather leaf (1/3 life-size) Variable Watermilfoil leaf (1/3 life-size)
If broadly-branching leaves are oppositely arranged on the stem and attached to the main stem by a slender leaf stem (<i>petiole</i>) SUSPECT FANWORT  white flower floating leaves white flower leaf stem (petiole) Fanwort (1/2 life-size)	If broadly-branching leaves are oppositely arranged on the stem and attached to the main stem by a slender leaf stem (<i>petiole</i>) SUSPECT FANWORT  white flower floating leaves white flower leaf stem (petiole) Fanwort (1/2 life-size)	SUSPECT INVASIVE WATER-MILFOIL  whorl emergent flower spike leaf (1/3 life-size) Eurasian Watermilfoil leaf (1/3 life-size)

C**Plants with blade- or strap-shaped leaves arranged on submersed stems**

Read the numbered descriptions below, and follow additional guidance where indicated. If no descriptions match your plant, rule out the following four depicted invaders.

		SUSPECT CURLY LEAF PONDWEED  (magnification may be necessary to see the serrations) leaf (1/6 life-size)
		SUSPECT EUROPEAN NAIAD  branching form seed (4x life-size) serrated leaves with blocky leaf bases (life-size)
		SUSPECT BRAZILIAN ELODEA OR HYDRILLA  whorl tuber Brazilian Elodea (1/3 life-size) Hydrilla (1/3 life-size)
		 If plant is not as described above, rule this invader out.
